SiT9105

1 Differential, 2 LVCMOS Outputs 3-PLL High Performance Clock Generator

Features

- · Clock Outputs
 - 1 differential output support LVPECL, LVDS, HCSL
 - 2 single-ended LVCMOS
- · Extremely low RMS phase jitter (random)
 - <1 ps (typical)</p>
- · Wide frequency range
 - 1 MHz to 220 MHz
- · Low frequency tolerance
 - ±25 PPM or ±50 PPM
- · Operating voltage
 - 2.5 or 3.3 V
 - Other voltages up to 3.63 V (contact SiTime)
- Operating temperature range:
 - Industrial, -40 to 85°C
 - Extended Commercial, -20 to 70°C
- · Small footprint
 - 22-pin, 7.0 x 5.0 x 0.9 mm QFN package
- · All packages are Pb-free and ROHs compliant
- · Ultra-reliable start up and greater immunity from interference

Benefits

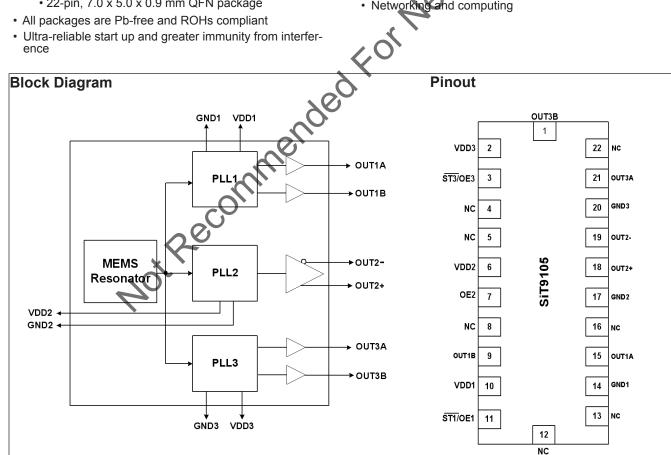

· Replacing up to 2 LVMOS and 1 differential oscillators

It's About Time

- · Integrated resonator
- · No crystal or load capacitors required
- · Eliminates crystal gualification time
- 50% + board saving space
- · More cost effective than quartz oscillators, quartz crystals and clock ICs.
- Completely guartz-free

Applications

- Server
- Router
- RAID controller
- · Gigabit Ethernet
- 10 Gigabit Ethernet
- esions Fiber Channel
- · SATA / SAS
- PCI-Express
- System clock
- · Networking and computing

Description

The SiT9105 is a 3-PLL factory programmable clock generator with embedded MEMS resonator. The device uses SiTime propriety MEMS technology, MEMS FirstTM, to enable a single chip solution with multiple outputs for consumer and communications applications.

The SiT9105 has three PLLs that can be programmed to generate any frequency outputs from 1 to 220 MHz .

The PLL2 is connected to a differential output buffer that can generate a differential output at LVPECL, LVDS, or HCSL signalling. The PLL1 and PPL3 are contected to signle-ended LVCMOS output buffers.

Programming Configuration

The SiT9105 is a factory programmable device. All the parameters in table 1 given as "Enter Data" can be programmed into the device.

Absolute Maximum Ratings

Attempted operation outside the absolute maximum ratings of the part may cause permanent damage to the part. Actual performance of the IC is only guaranteed within the operational specifications, not at absolute maximum ratings.
